

WORK EXPERIENCE

NinjaOne / United States (REMOTE)

Aug 2025 - Present

- Leading frontend development in a large monorepo, building core app features with React and a shared design system.
- Improved code quality and team confidence through better component architecture, test coverage, and shared standards that cross team boundaries.
- Collaborates daily with Product, Design, and Backend to ship consistently without letting the codebase get ahead of us.

Hatch (acq. by Yelp ~\$300M) / United States (REMOTE)

Oct 2024 - Aug 2025

- Led frontend architecture for an AI-powered CRM handling 150k+ monthly conversations across SMS, email, and voice.
- Built the core product surface: real-time messaging, drag-and-drop workflows, rich text editing, and analytics dashboards for lead tracking.
- Launched Voice AI: automated phone conversations via React, TypeScript, Vite, Twilio, and ElevenLabs.

StackBlitz / United States (REMOTE)

Dec 2021 - Jun 2024

- Built Web Publisher, a browser-based editor that lets non-technical people update documentation without filing an engineering ticket.
- Developed core features of the StackBlitz browser IDE, including collaborative code review and team project sharing.
- Shipped iterative UX improvements across StackBlitz's products, used by thousands of developers.

Gympass / Brazil (REMOTE)

Aug 2019 - Nov 2021

- Built and maintained Yoga, a cross-platform design system used across Gympass's web and mobile apps. Before it, teams were building their own components independently.
- Worked directly with product and design over two years to keep the system consistent as the product grew and changed.

Catho / Brazil (REMOTE)

Nov 2017 - Jul 2019

- Created React95 (3k+ GitHub stars), an open-source component library inspired by Windows 95, and winner of Fun Side Project of the Year at the GitNation Open Source Awards (Amsterdam, 2019). It later became the reference for Catho's Quantum design system.
- Integrated Quantum components across Catho's platform alongside designers and backend developers.

Opus Software / Brazil

Jan 2014 - Oct 2017

- Built and maintained full-stack applications in Java, C#, JavaScript, Node.js, AngularJS, and Angular for clients in fintech, recruitment, and fast food.

PROFILE

Senior Frontend Engineer, 10+ years building design systems and React-heavy products. Created React95, which won Fun Side Project of the Year at the GitNation Open Source Awards in Amsterdam (2019). Remote since 2017, working with companies in the US and Brazil, most recently at NinjaOne, and before that at Hatch (acquired by Yelp), StackBlitz, and Gympass.

EDUCATION

Bachelor's in Information Systems

Universidade de Sao Paulo

Sao Paulo, Brazil / 2011 - 2015

Academic exchange

Universidade do Porto

Porto, Portugal / 2012 - 2013

Merit scholarship for 6 months
